TenneT Holding B.V.

Update following 2020 results and Dutch Draft Method Decisions

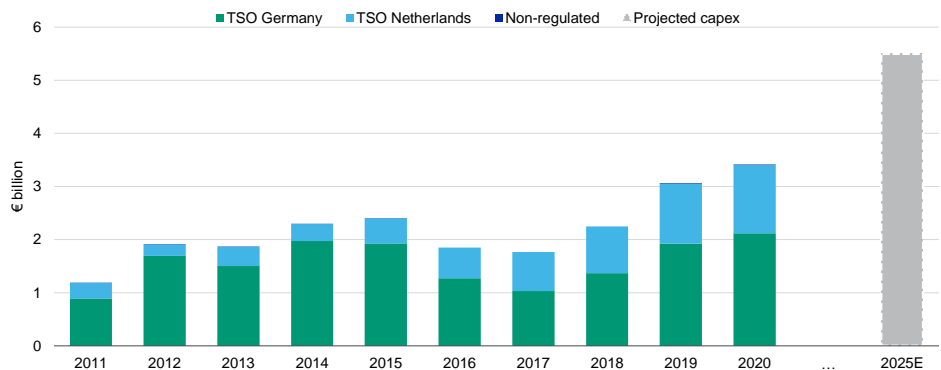

Summary

The credit quality of [TenneT Holding B.V.](#) (TenneT, A3 stable) is underpinned by (1) the company's monopoly position as the licenced provider of electricity transmission services in the Netherlands and its service area in Germany; (2) the relatively stable and predictable cash flow the company generates under well-defined and stable regulatory frameworks in each country; (3) supportive and high credit quality ownership by the [Government of the Netherlands](#) (Aaa/P-1, stable); and (4) timely cost recovery for large investment projects under the German and Dutch regulatory frameworks.

TenneT's credit profile is constrained by (1) its mounting investment programme, growing to €5 billion-€6 billion annually over the next five years from c.€3 billion currently spent annually, which will weaken key credit metrics; (2) lower allowed returns under the current regulatory period; and (3) a further decrease in returns proposed by the Dutch regulator for the next regulatory period starting in January 2022. TenneT's capital objective of maintaining an A3 rating should mitigate these challenges despite key credit metrics likely to remain under pressure through the early 2020s and closer to the tighter end of our guidance range for the rating.

Exhibit 1

TenneT's annual capital spending is expected to reach €5-6 billion annually by 2025

Projected capex corresponds to the midpoint of TenneT's guidance of capex growing to €5-€6 billion over the next 5 years.  
Source: TenneT and Moody's Investors Service

TenneT's A3 rating incorporates a two-notch uplift from its Baseline Credit Assessment (BCA) of baa2, taking into account its ownership by the Dutch State and its strategic importance to national energy policy.

## Credit strengths

- » Status as a monopoly provider of electricity transmission network operations in the Netherlands and Germany
- » Stable and predictable cash flow, underpinned by the well-defined and relatively stable regulatory frameworks in both countries
- » Strong, demonstrated support by TenneT's 100% owner, the Dutch government, resulting in a two-notch uplift from TenneT's standalone credit quality
- » Experienced management and successful execution of complex on- and offshore transmission projects

## Credit challenges

- » Lower allowed returns in current regulatory periods, and limited scope for outperformance on certain cost allowances in Germany
- » Substantial investment programme continues to grow, depressing key credit metrics
- » Expectation of further reduction in allowed returns in the Netherlands at the start of the next regulatory period in 2022

## Rating outlook

The stable outlook reflects our expectation that TenneT will continue to meet the minimum ratio guidance over the next 18 months, with funds from operations (FFO)/net debt at least in the high single digits in percentage terms, despite the extensive investment programme and lower allowed regulatory returns.

Given the extent of planned investments, TenneT's current rating level will show limited financial buffer against its minimum ratio guidance over the period to 2023 (the end of the current regulatory period in Germany) in the absence of TenneT taking measures to strengthen its financial profile.

## Factors that could lead to an upgrade

Given the significant increases in planned investments over the next five years and the lower allowed returns over the next few years, a rating upgrade is unlikely. However, an upgrade could be warranted if, during the main investment phase:

- » TenneT's FFO interest coverage is solidly above 3.0x; and
- » FFO/net debt is at least in the low teens in percentage terms on a sustained basis

## Factors that could lead to a downgrade

- » Failure to maintain FFO interest coverage of at least 2.5x;
- » A decline in FFO/net debt below the high single digits in percentage terms; and
- » Inability to maintain retained cash flow (RCF)/net debt above 5%

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on [www.moody's.com](http://www.moody's.com) for the most updated credit rating action information and rating history.

## Key indicators

Exhibit 2

### TenneT Holding B.V.

	31/12/2016	31/12/2017	31/12/2018	31/12/2019	31/12/2020
FFO Interest Coverage	5.5x	6.6x	6.8x	8.4x	10.1x
Net Debt / Fixed Assets	58.9%	58.6%	60.6%	57.1%	65.6%
FFO / Net Debt	10.1%	12.9%	12.4%	15.0%	15.2%
RCF / Net Debt	7.0%	10.5%	10.0%	13.4%	13.9%

Note: Financial metrics in 2020 have been negatively impacted in 2020 by TenneT's temporary funding of negative EEG balances through a total of €2 billion liquidity facilities of which €1.5 billion were drawn at 31 December 2020. Excluding this EEG-related debt, metrics for 2020 would have been as follows: Net debt / fixed assets of 58.4%, FFO / net debt of 17.1% and RCF / net debt of 15.6%. The full amount of EEG-related debt was repaid in January 2021.

All ratios are based on 'Adjusted' financial data and incorporate Moody's Global Standard Adjustments for Non-Financial Corporations. Net debt calculations include 50% equity treatment on the perpetual capital securities in our adjustment to TenneT's financial statements. The instrument qualifies for basket "C" treatment under our Cross Sector Rating Methodology 'Hybrid Equity Credit' (September 2018).

## Profile

TenneT Holding B.V. (TenneT) is the fully state-owned holding company of TenneT TSO B.V. and TenneT GmbH & Co. KG, the intermediate holding company for the group's German subsidiaries TenneT TSO GmbH and TenneT Offshore GmbH. TenneT TSO B.V. is the sole owner and operator of the Netherlands' high-voltage transmission grids. TenneT TSO GmbH is the owner and operator of the high-voltage electricity transmission network that runs north to south through large sections of Germany. With a total grid length of around 24,000 kilometres (km), TenneT's network area covers over 42 million end-users in the Netherlands and Germany.

Exhibit 3

### Simplified organisational structure as of 31 December 2020

Source: TenneT

More than 95% of TenneT's revenue and operating income stem from regulated network activities in the Netherlands and Germany. The remaining activities, including participations in the North West European energy exchange (EPEX Spot) and the merchant cable operator BritNed, are strongly associated with the core business.

## Detailed credit considerations

### Low business risk, underpinned by developed regulatory frameworks

TenneT derives most of its earnings from its monopoly electricity transmission activities in the Netherlands, where it is the national transmission system operator (TSO), and in Germany, where it is one of the largest of the four TSOs. Around 70% of TenneT's operating profit, or EBIT, is derived from its German network activities, a trend that will continue as we expect around the same share of TenneT's investments for the 10-year period through 2029 will be incurred in Germany. While both the German and Dutch regulatory frameworks are well-defined and relatively stable, our overall assessment of stability and predictability of the group's operations is weighed towards the German regulatory framework and its characteristics, which has a few weaknesses vis-à-vis the Dutch regulatory framework. Specifically, the German framework reflects the following differences compared with the Dutch framework:

- » **1. A shorter track record.** Incentive-based regulation in Germany started in 2009, with only two completed regulatory periods, whereas liberalisation of electric transmission in the Netherlands started in 2001 with six completed regulatory periods. Most other Western European jurisdictions commenced similar regulation in the late 1990s to the mid-2000s with at least three, but often four or more completed regulatory periods.
- » **2. Lower degree of transparency.** In recent years, most national regulatory authorities (NRAs) have adopted increasingly consultative approaches before taking key regulatory decisions. In contrast, the German energy regulator (*Bundesnetzagentur*, BNetzA) continues to initially consult mostly on a private level with the energy networks, although public consultation is required for major changes and amendments. However, key regulatory parameters, such as the regulated asset base or a detailed financial model, are not publicly disclosed. The Dutch regulator (the Authority of Consumer and Markets, ACM) adopts a consultative approach, with determinations largely driven by regulatory inputs in a mechanistic manner, and publishes a financial model alongside the final determination.
- » **3. Sequential decision-making with delays.** Unlike most other NRAs in Western Europe, the BNetzA tends to publish decisions on specific aspects in a fragmented, phased manner. For example, the decision on allowed equity returns was published in summer 2016, while cost-efficiency parameters were published in late 2018. In the Netherlands, decisions on all key aspects of the regulatory framework for the regulatory period are summarised in the Method Decisions.

**German operations: increased cash flow visibility through 2023, but tighter spending allowances on investment measure projects; declining allowed equity returns**

TenneT has increased cash flow visibility for its German operations through 2023 (which is the end of the current third regulatory period for German electricity networks) following affirmation in July 2019 of the allowed equity returns for the third regulatory period that commenced 1 January 2019 and runs through 31 December 2023. However, allowed equity returns are significantly lower compared to the prior regulatory period (6.91% compared with 9.05% [both nominal, pre-tax, post-trade tax] on most of TenneT's assets<sup>1</sup>). This lower return will weaken cash-flow-based metrics (the BNetzA, like the federal energy regulator in Belgium, only sets the allowed equity return rather than the allowed return on the whole regulated asset base, with German network companies' actual cost of debt feeding into the overall cost assessment). This lower return is principally because of cuts in (1) the risk-free rate, reflecting the continued low interest environment since the global financial crisis; and (2) a lower market risk premium.

The regulatory framework is supportive of the large investment requirements of the Germany electricity TSOs and reflects the benefits to German TSOs from (1) allowed returns on capital invested during the construction period (for enhancement capital spending recognised under the so-called investment measures); (2) a generic operating spending allowance for investment measures in construction; (3) a cost-sharing mechanism for payments to offshore wind farms; and (4) an overall liability cap for connection delay damages. These components are supportive given that capital spending requirements will significantly increase, particularly in the offshore segment, from the already high levels through 2030 under the latest German network development plan, approved in December 2019 (discussed in detail below).

**Limited scope for outperformance**

TenneT's ability to outperform regulatory cost allowances will principally be driven by whether or not its realised rate of annual cost productivity improvement is greater than regulatory assumptions. In this period, the regulator reduced the sector-wide general productivity factor for electricity (X-gen electricity) to 0.9% per annum (under court appeal) from 1.5% in the previous regulatory period, a smaller decline than for gas networks, where it was lowered to 0.49% (in the first two regulatory periods, both gas and electricity received the same regulatory defined productivity value).

On 10 July 2019, the regional court in Düsseldorf requested the BNetzA to re-evaluate the sector-wide general productivity for gas (X-gen gas). There is yet to be a hearing set to re-evaluate the sector-wide general productivity for electricity (X-gen electricity). Positively, TenneT's company-specific cost-efficiency factor is very high at 99.92% in this period, slightly higher than in the previous period (97%), making regulatory allowances slightly less demanding than in the previous period.

The BNetzA has tightened some regulatory cost allowances in this period relating to "investment measure" projects. TenneT historically achieved significant outperformance against the regulatory opex allowance for connecting offshore wind farms to the transmission grid during the construction phase. As actual opex and capex costs for offshore connections are now pass-through activity, TenneT will no longer benefit from this task. The opex lump-sum allowance for new onshore investment measure applications (made since 1 January 2019) is also now 0.2% during the construction phase, while the 0.8% remains applicable after starting operations, a change from the prior 0.8% construction phase lump-sum allowance. The impact of this change is however not material to earnings.

**Dutch operations - current regulatory period 2017-21: amended regulatory determinations modestly credit positive**

TenneT has good cash flow visibility for its Dutch operations until the end of 2021 when the current regulatory period ends. The Method Decisions, the regulator's final determination, for the period 2017-21 were published in July 2018 and originally included a

gradual reduction in the allowed return (weighted average cost of capital, WACC), to 3% (real, pre-tax). Following successful appeals by network operators, new Method Decisions were published in January 2019, with the average WACC unchanged over the period but starting and finishing 20 basis points (bps) higher and lower, respectively. The Dutch networks operators appealed the decision to lower the 2021 WACC and the appeal body College van Beroep voor het bedrijfsleven (CBB), ruled in December that the 2021 WACC in the original Method Decision should apply, while the amended 2016 WACC of 4.5% real, pre-tax for non expansion investments remained. Concurrently, the court also ruled that preventive maintenance costs (in addition to corrective maintenance) for TenneT's offshore operations should be a pass through.

Under the regulatory framework, TenneT is able to recover investment costs for all offshore projects and certain onshore national coordination projects (RCR projects) during construction. Timely recovery of these investments is supportive to TenneT's credit given the group's significant and growing offshore capital spending programme. While allowed returns are significantly lower than those of other European TSOs whose operations are also governed by a real framework, reducing operating cash flow, this is partially offset by the group's low average cost of debt (estimated around 1.8% as of year-end 2020, excluding EEG-related debt) which is below the regulator's assumption, which falls from 3.58% to 2.29% over the period for existing assets<sup>2</sup>) for the duration of the current regulatory period.

The amended Method Decisions reduce the risk of underperformance against certain other cost allowances, in particular (1) procurement costs for energy and ancillary services that we had expected to increase over time but where the allowance was held fixed over the period (the bonus malus system that existed in the prior regulatory period was reinstated); and (2) the operating spending allowance of 1% of the investment value of the offshore grid. TenneT sought and received full recovery of preventive and corrective maintenance costs pursuant to the CBB ruling on 28 November 2019<sup>3</sup>.

#### **Dutch operations: draft Method Decisions for 2022-26 proposes further cut in WACC by 180 bps**

On 19 April 2021, the ACM has published its draft Method decisions for TenneT's Dutch operations for the 2022-26 regulatory period. The regulator proposes a reduction in allowed returns for TenneT's onshore transmission and system operations activities of around 180 basis points in real terms between 2021 and 2022, mostly reflecting the low interest rate environment. However, from 2022 the regulator proposes that it will recalculate the allowed return based on actual rates so that TenneT will be able to recover any difference with a two-year delay. The allowed return proposed in the draft determination corresponds to 1.2% in 2022 and 1.0% in 2026 (both in real terms) compared to 3.0% in real terms in 2021. The WACC for offshore grid has been set to 1.5% real, pre-tax for the period 2022-26.

The proposed cut in WACC is credit negative although its impact, if implemented, on TenneT's cash flows will be mitigated by the expected increase in RAB in the context of growing capital investment. We expect the impact on group's financial metrics to be relatively modest as Dutch operations represent about a quarter of the group's operating profit.

The Final Method Decisions are expected to be published in September 2021.

#### **Continued sizeable investment programme will increase leverage**

TenneT has a sizeable investment programme on the Dutch and German electricity transmission grids (both onshore and offshore) which we estimate around €50-€60 billion over the next 10 years, necessitating a jump in annual spend within the next five years to €5-€6 billion annually from €3.4 billion in 2020. Moody's relies partly on estimates of programme costs from the Network Development Plan 2030 (2019) and based on inputs from the German TSOs. Much of the rising cost is aimed at connecting new, primarily renewable generation sources, strengthening existing transmission assets and removing bottlenecks on both transmission networks.

TenneT's planned capital spending over the next 10 years has more than tripled in the last seven years, from around €16 billion in 2014 to our estimate of €50-60 billion for the next 10 years (as of 2021).<sup>4</sup> This compared with net PP&E of €20.9 billion as of year-end 2020. Around two-thirds of this total programme relates to investments in Germany (onshore and offshore).

Exhibit 7

Summary of TenneT's largest planned investment projects

Country	Type	Key projects
Germany	Onshore <sup>1</sup>	DC - SuedOstLink (jointly with 50Hertz; SuedLink (jointly with TransnetBW); DC25 Heide/West - Polsum (jointly with Amprion; DC 21b Wilhelmshaven2-Uentrop (jointly with Amprion) AC - Ostbayerring; Wahle - Mecklar; Conneforde - Cloppenburg - Merzen; Stade - Landesbergen; Westküstenleitung; Ostküstenleitung; Raitersaich - Altheim; Wahle - Wolmirstadt; Mecklar - Grafenrheinfeld; Conneforde - Soltrum; Dollern - Ovenstadt
Germany	Offshore	More than 7 GW connected (mainly DC), expecting almost 10GW by 2025 (with addition of DolWin5, DolWin6 , BorWin5) and additional 0.9GW by 2027 (BorWin6) 20GW by 2030 and 40GW by 2040 targeted (with other German TSOs)
Netherlands	Onshore	<b>380kV projects:</b> North West 380; South West 380 (East and West); Expansion Diemen - Lelystad - Ens; Capacity expansion Noord-Holland
Netherlands	Offshore	3.5GW to be connected by 2023 (5x 0.7GW wind farms) Additional 6.1GW in 2024-2030 (3x 0.7GW HVAC projects; 2x 2GW HVDC projects)
Interconnectors <sup>2</sup>		COBRACable, operative since September 2019 (Netherlands - Denmark) NordLink, completion expected in 2021 (Germany - Norway)

(1) Some of the DC projects in Germany are being built by two German TSOs given the proposed lines go through the licence areas of both TSOs. For example, the costs of the SuedLink project (a 2x 2 GW HVDC North-South connection) are being shared equally between TenneT and TransnetBW (owned by [Energie Baden-Wuerttemberg AG](#) [A3 negative]). (2)

Interconnectors not connecting Germany and the Netherlands.

Implementing ambitious energy policy objectives in Germany and the Netherlands will drive high investment levels throughout the early and mid-2020s

As a result of the time associated with obtaining the relevant permissions for onshore projects in Germany and the ambitious decarbonisation objectives of the German and Dutch governments, we expect TenneT's investment levels to remain sizeable throughout the 2020s, as reflected in the capital spending guidance provided by the company and the 2030 German network development plan (NEP 2030), finalised in December 2019.

An updated German NEP through 2035 (NEP 2035) will be published in 2021, the second draft of which was published in April 2021 and includes a significant increase in grid investment estimated to reach up to €79 billion of total investment through 2035 for the four German TSOs, mostly related to connection of new renewable capacity in particular offshore wind parks.

In the Netherlands, the merging of the Dutch Electricity Act (E-Act, 1998) and the Gas Act into a modernised Energy Act (*Energiewet*) will incorporate directives from the existing Climate Agreement<sup>5</sup> (*Klimaatakkoord*) and the Third Energy Package, among others, with initial public consultations held in the first half of 2020. TenneT expects implementation in the second half of 2022, although subject to parliamentary debate and legal approval. The *Energiewet*, in addition to existing policy measures, will drive investments of around €1.2 billion for 2020 to nearly €1.8 billion by 2024, or a c.13% year-on-year increase, before they taper off.

Most of these investments relate to building 3.5 GW of offshore wind farms in the Dutch sector of the North Sea through 2023. A further 6.1 GW in offshore wind energy capacity will be built between 2024 and 2030. The build-out will facilitate the Dutch government's policy objective of at least a 49% reduction in CO<sub>2</sub> levels from the 1990 levels, which includes phasing out all coal-fired power plants by 2030. These investments and their timing will depress TenneT's key financial metrics, particularly as the next regulatory period will start as these costly investments take shape, and the allowed returns across jurisdictions on a real-return basis are forecast to decline.

### Track record of equity support; continued prudent financial policy required to manage demands of further capital spending increase

In recent years, TenneT has taken a series of measures to strengthen its capital structure given the further increase in planned investments. Furthermore, TenneT has defined capital management objectives, which include maintaining a senior unsecured long-term credit rating of at least A3.

The €1.19 billion committed equity contribution from the Dutch government over 2017-19 clearly demonstrated support for TenneT's investment programme in the Netherlands. The upsizing of TenneT's hybrid capital in 2017, 2018 and 2020 with an associated net increase in hybrid equity credit of €800 million and the continued lower dividend payout ratio of 35%<sup>6</sup> (rather than 50%) for the remainder of this decade, also strengthens TenneT's position in the face of rising investment needs.

The Dutch government and TenneT are looking into further ways to support TenneT's growing capital needs. In a [letter](#) dated 31 March 2021 from the Dutch Minister of Finances to the House of Representatives, the Minister gave an update on TenneT's increasing capital needs over the next decade with a planned capital contribution from the Dutch state totalling €3.8 billion over 2023-2026 related to investments in the Netherlands. The final decision regarding the size and timing of the equity contribution will follow an external assessment commissioned by the Dutch state to be completed in 2022. The exclusive talks held in 2020 between the Dutch and the German governments regarding a potential sale of a stake in TenneT to the German state have been halted due to differing views between the two governments on the size and related governance rights of the potential stake sale. The source of support for the German share of capital need totalling c.€3.65 billion for the next 10 years is yet to be decided by the Dutch government. Support for TenneT's German business is not expected to be needed until 2024.

Given the planned step-up in investment levels and the lower allowed returns in both jurisdictions, we expect TenneT to need to maintain a prudent financial policy to maintain FFO/net debt at least in the high single digits in percentage terms throughout the early 2020s. We believe TenneT has limited financial headroom at the current rating level over the period to 2023 (and the end of the current regulatory period in Germany) without further measures to support its financial profile.

Exhibit 10

#### Limited financial headroom at the current rating level until 2023

Historical: (1) TenneT's historical IFRS-based metrics reflect volatility in volumes and auction receipts as well as true-up adjustments for over- and under-recovery against allowed regulatory revenue. When these are stripped out, the underlying performance is less volatile, with reported FFO/net debt between 13.7% and 14.8% over the 2017-19 period.

Projections: Assumptions include no further measures taken to support financial profile aside from continuation of the current dividend policy.

Source: Moody's Investors Service

### **Strong support by TenneT's owner, the Dutch government, results in a two-notch uplift to its standalone credit quality**

TenneT's A3 rating incorporates a two-notch uplift to its standalone credit quality, taking into account its ownership by the Dutch government and the strategic importance to national energy policy. Government support was most recently illustrated by the aforementioned €1.19 billion committed equity contribution from the Dutch government, in support of the group's investment programme. TenneT received the final instalment of €410 million in December 2019. The Dutch government is considering further equity support of €3.8 billion over the period 2023-2026 and a total of €4.25 billion over 2022-2030, with a final decision to be made in 2022 following an external assessment of capital needs for TenneT's Dutch investment programme.

The latest committed equity contributions followed TenneT TSO B.V.'s designation as the national offshore electricity TSO in the Netherlands, which requires TenneT TSO to construct 3.5GW of offshore wind connections (Phase 1 offshore wind). TenneT's investment programme facilitates Dutch energy policy objectives and government support is therefore strong, given the importance of providing grid connections for new renewables connected to the transmission grid. The Dutch government's plan to phase out all coal by 2030 under the law adopted in December 2019 further accentuates grid reinforcements and expenditure for the onshore grid.

### **ESG Considerations**

Environmental considerations incorporated into our credit analysis for TenneT acknowledge the company's lack of exposure to generation and therefore low carbon transition risk. As a facilitator of energy transition in the Netherlands and Germany, TenneT's transmission investments continue to grow significantly year over year to deliver on the countries' decarbonisation efforts. Given the declining allowed equity returns in the wake of these investment requirements, TenneT faces increased pressure on financial metrics and thus indirect environmental risks. However the company is exposed to environmental risks as they relate to the integrity of its electric cables and insulation by use of sulphur hexafluoride, or SF<sub>6</sub>, a highly potent greenhouse gas that is thousand times more pollutive than carbon dioxide.

Social risks are primarily related to the company's construction activities, particularly onshore, above and below ground cable activities and their societal impact on neighborhoods and scenic landscapes. TenneT's ability to construct transmission assets depends on regulatory approvals that assess potential environmental and social issues. From a governance perspective, financial policies that result in a strong financial position are important for managing the company's business, environmental and social risks.

### **Liquidity analysis**

We expect TenneT to maintain good liquidity over the next 12 months, supported by (1) operating cash flow from its regulated businesses; (2) a €3.3 billion committed revolving credit facility with €3.0 billion maturing in November 2025 and €0.3 billion maturing in November 2024, both undrawn at 31 December 2020; (3) a €250 million EIB facility related to TenneT's SouthWest 380kV project undrawn as of 31 December 2020; and (4) unrestricted cash and cash equivalents of €477 millions as of 31 December 2020.

These will be sufficient to cover the €715 million of bond and loan maturities in 2021 (excluding EEG-related loans which were redeemed in January 2021), dividend payments (including hybrid interest and dividends to third parties) of around €330 million and planned investments.

Exhibit 11

**TenneT has a well-balanced debt maturity profile**

Breakdown of interest bearing debt as of 31 December 2020

(1) EEG-related loans of €1,528 million outstanding at 31 December 2020 and repaid in January 2021 excluded from the chart; (2) Non-call period of €1.1 billion of green hybrids ends on 1 June 2024 and that of €1 billion of green hybrids ends on 22 July 2025, both excluded from the chart

Source: TenneT and Moody's Investors Service

Under the German Renewable Act (Erneuerbare Energien Gesetz, or EEG), TenneT is also required to buy renewable energy at set feed-in-tariffs and sell it on the spot market. The difference is covered through a surcharge payment, determined annually (set at 6.5 €/ct/kWh for 2021), which is added to the consumer tariffs.

Given the impact of the coronavirus outbreak in 2020 which led to significant unforeseen variations in renewable energy volumes and wholesale electricity prices, German TSOs including TenneT have accumulated significant EEG receivables on their balance sheet. TenneT had to raise an additional €1.5 billion of committed financing and €0.5 billion of uncommitted financing in 2020 to cover the EEG surcharge costs. The German government will finance the EEG in 2021 as a result of the Climate Programme 2030 (Klimaschutzprogramm 2030) for a total of €10.8 billion to be shared between the four German TSOs, with TenneT receiving 32% of the total in 3 installments (€1.63 billion in January 2021, €960 million in May 2021 and €864 million in October 2021). TenneT had €1.5 billion outstanding on EEG-related loans at 31 December 2020 to fund the EEG negative balance at the end of 2020. The full amount on these EEG-related loans was repaid in January 2021 following the reception of the first payment from the German government.

Exhibit 12

**Unforeseen variations in renewables energy volumes and wholesale electricity prices have led to negative EEG balance for the German TSOs in 2020**

b) Actual BCA Assigned		baa2		baa2
Government-Related Issuer				<b>Factor</b>
a) Baseline Credit Assessment				baa2
b) Government Local Currency Rating				Aaa
c) Default Dependence				Moderate
d) Support				Strong
e) Final Rating Outcome				A3

(1) All ratios are based on 'Adjusted' financial data and incorporate Moody's Standard Adjustments for Non-Financial Corporations. (2) As of 12/31/2020. (3) This represents Moody's forward view; not the view of the issuer; and unless noted in the text, does not incorporate significant acquisitions and divestitures. (4) Projected financial metrics are based on underlying performance, whereas reported metrics are based on IFRS and so will be impacted by volatility in volumes and auction receipts, as well as true-up adjustments for over- and under-recovery against allowed regulatory revenue.

CREDIT RATINGS ISSUED BY MOODY'S CREDIT RATINGS AFFILIATES ARE THEIR CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES, AND MATERIALS, PRODUCTS, SERVICES AND INFORMATION PUBLISHED BY MOODY'S (COLLECTIVELY, "PUBLICATIONS") MAY INCLUDE SUCH CURRENT OPINIONS. MOODY'S DEFINES CREDIT RISK AS THE RISK THAT AN ENTITY MAY NOT MEET ITS CONTRACTUAL FINANCIAL OBLIGATIONS AS THEY COME DUE AND ANY ESTIMATED FINANCIAL LOSS IN THE EVENT OF DEFAULT OR IMPAIRMENT. SEE APPLICABLE MOODY'S RATING SYMBOLS AND DEFINITIONS PUBLICATION FOR INFORMATION ON THE TYPES OF CONTRACTUAL FINANCIAL OBLIGATIONS ADDRESSED BY MOODY'S CREDIT RATINGS. CREDIT RATINGS DO NOT ADDRESS ANY OTHER RISK, INCLUDING BUT NOT LIMITED TO: LIQUIDITY RISK, MARKET VALUE RISK, OR PRICE VOLATILITY. CREDIT RATINGS, NON-CREDIT ASSESSMENTS ("ASSESSMENTS"), AND OTHER OPINIONS INCLUDED IN MOODY'S PUBLICATIONS ARE NOT STATEMENTS OF CURRENT OR HISTORICAL FACT. MOODY'S PUBLICATIONS MAY ALSO INCLUDE QUANTITATIVE MODEL-BASED ESTIMATES OF CREDIT RISK AND RELATED OPINIONS OR COMMENTARY PUBLISHED BY MOODY'S ANALYTICS, INC. AND/OR ITS AFFILIATES. MOODY'S CREDIT RATINGS, ASSESSMENTS, OTHER OPINIONS AND PUBLICATIONS DO NOT CONSTITUTE OR PROVIDE INVESTMENT OR FINANCIAL ADVICE, AND MOODY'S CREDIT RATINGS, ASSESSMENTS, OTHER OPINIONS AND PUBLICATIONS ARE NOT AND DO NOT PROVIDE RECOMMENDATIONS TO PURCHASE, SELL, OR HOLD PARTICULAR SECURITIES. MOODY'S CREDIT RATINGS, ASSESSMENTS, OTHER OPINIONS AND PUBLICATIONS DO NOT COMMENT ON THE SUITABILITY OF AN INVESTMENT FOR ANY PARTICULAR INVESTOR. MOODY'S ISSUES ITS CREDIT RATINGS, ASSESSMENTS AND OTHER OPINIONS AND PUBLISHES ITS PUBLICATIONS WITH THE EXPECTATION AND UNDERSTANDING THAT EACH INVESTOR WILL, WITH DUE CARE, MAKE ITS OWN STUDY AND EVALUATION OF EACH SECURITY THAT IS UNDER CONSIDERATION FOR PURCHASE, HOLDING, OR SALE.

MOODY'S CREDIT RATINGS, ASSESSMENTS, OTHER OPINIONS, AND PUBLICATIONS ARE NOT INTENDED FOR USE BY RETAIL INVESTORS AND IT WOULD BE RECKLESS AND INAPPROPRIATE FOR RETAIL INVESTORS TO USE MOODY'S CREDIT RATINGS, ASSESSMENTS, OTHER OPINIONS OR PUBLICATIONS WHEN MAKING AN INVESTMENT DECISION. IF IN DOUBT YOU SHOULD CONTACT YOUR FINANCIAL OR OTHER PROFESSIONAL ADVISER.

ALL INFORMATION CONTAINED HEREIN IS PROTECTED BY LAW, INCLUDING BUT NOT LIMITED TO, COPYRIGHT LAW, AND NONE OF SUCH INFORMATION MAY BE COPIED OR OTHERWISE REPRODUCED, REPACKAGED, FURTHER TRANSMITTED, TRANSFERRED, DISSEMINATED, REDISTRIBUTED OR RESOLD, OR STORED FOR SUBSEQUENT USE FOR ANY SUCH PURPOSE, IN WHOLE OR IN PART, IN ANY FORM OR MANNER OR BY ANY MEANS WHATSOEVER, BY ANY PERSON WITHOUT MOODY'S PRIOR WRITTEN CONSENT.

MOODY'S CREDIT RATINGS, ASSESSMENTS, OTHER OPINIONS AND PUBLICATIONS ARE NOT INTENDED FOR USE BY ANY PERSON AS A BENCHMARK AS THAT TERM IS DEFINED FOR REGULATORY PURPOSES AND MUST NOT BE USED IN ANY WAY THAT COULD RESULT IN THEM BEING CONSIDERED A BENCHMARK.

All information contained herein is obtained by MOODY'S from sources believed by it to be accurate and reliable. Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process or in preparing its Publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY CREDIT RATING, ASSESSMENT, OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any credit rating, agreed to pay to Moody's Investors Service, Inc. for credit ratings opinions and services rendered by it fees ranging from \$1,000 to approximately \$5,000,000. MCO and Moody's Investors Service also maintain policies and procedures to address the independence of Moody's Investors Service credit ratings and credit rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold credit ratings from Moody's Investors Service and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at [www.moody.com](http://www.moody.com) under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657 AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJJK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJJK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJJK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJJK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJJK or MSFJ (as applicable) have, prior to assignment of any credit rating, agreed to pay to MJJK or MSFJ (as applicable) for credit ratings opinions and services rendered by it fees ranging from JPY125,000 to approximately JPY550,000,000.

MJJK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.
